

All About Growing Milkweed for the Monarch Butterfly.

This page was created to help you in collecting, germinating and growing your own milkweed plants for next to nothing so that you can have plenty of little and bigger plants for the monarch butterfly breeding season in our areas across Canada and USA. Most of these pdf files have been around for awhile and some are fairly new. Save the links in your computer for later needs, any other information in pdf format that will added in the future will always be listed below on this page. (One of these days I will add some audio so it will make more sense.) Thank you for your interest in helping the monarch butterfly. :-)

MORE INFO BELOW

In case you forgot to cold stratify your milkweed seeds last fall just try the JAR indoor method for quick germination in three days. Trust me! I does work cause I've tried exactly as explained in the short movie below. :-)

JARINATION Method <http://www.savethemonarchbutterfly.ca/jarination-tips.pdf>

The Wet Towel Germination Method (best when seeds are already cold stratified)
<http://www.savethemonarchbutterfly.ca/wet-towel.pdf>

Jarmination Beginning

Jarmination Results in a few weeks

Please consider helping the monarch butterfly migration by raising a few of them during the breeding season in your area. It's fun and very rewarding. Hundreds of thousands of people are doing it all over North America.
