

All About Growing Milkweed for the Monarch Butterfly.

This page was created to help you in collecting, germinating and growing your own milkweed plants for next to nothing so that you can have plenty of little and bigger plants for the monarch butterfly breeding season in our areas across Canada and USA. Most of these pdf files have been around for awhile and some are fairly new. Save the links in your computer for later needs, any other information in pdf format that will added in the future will always be listed below on this page. Even though most of these pdf are in a power point we've used in live presentations in the past, due to covid-19 restrictions cannot be used as such and therefore I also saved them into pdf. ( One of these days I will add some audio so it will make more sense.)
